STRONG-DOCK

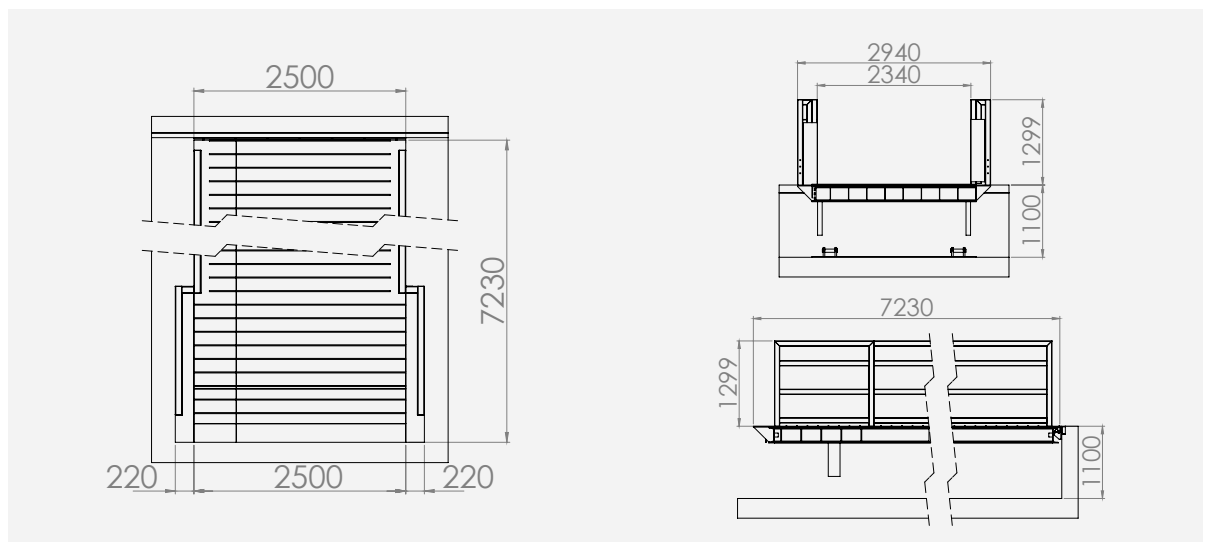

CATTLE LOADING RAMPS

The Strong-Dock is a hydraulic leveler ramp that **allows for the unloading of each level of the truck at once**. This allows livestock to exit comfortably and without stress, all together, eliminating significant height differences that might hinder their passage to the slaughterhouse.

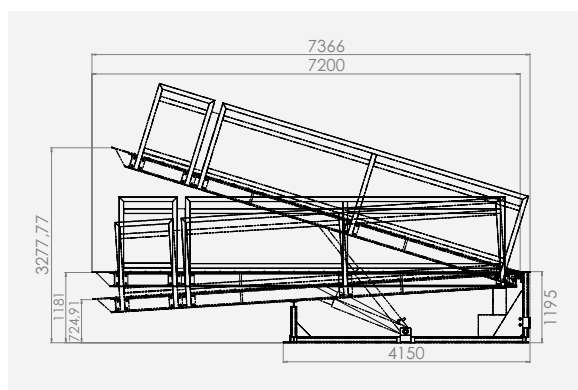

This platform prevents animal injuries during loading and unloading, **reduces unloading times**, optimizes the work of operators, and **increases the quality and quantity of the product** by avoiding the need to discard animals subjected to high levels of stress that could spoil their meat.
