HINGED FIRE DOOR

Alapont Global hinged fire doors offer **60-minute fire resistance**.

They are commonly used **indoors and outdoors** where fire protection and evacuation routes are required. These hinged fire doors can also serve as pedestrian access doors in residences, industries, institutions, or other facilities with special needs.

They are manufactured to the highest quality standards and undergo rigorous testing exceeding safety requirements.

REGULATIONS AND CERTIFICATION

UNE EN 1634-1

COMPONENTS

1. INTUMESCENT SEAL

Installed around the perimeter of the door, it expands in the event of a fire, leaving it completely sealed.

2. FRAME

Option of a Z-shaped frame, a corridor frame, or a wall-hugging frame with various sheet metal thicknesses and finishes.

3. LEAF

The door leaf is made of sheet metal with various finishes: pre-coated, lacquered, or galvanized. The leaf thickness is 62 mm. It is filled with insulating materials that guarantee its fire-resistant properties. Single and double-leaf doors are available.

4. OPTIONAL FEATURES

Panic bar, viewer/peephole, locking selectors, electromagnet, handles.
