

Accessories for loading bays

STEEL BUMP STOP + 2 RUBBERS

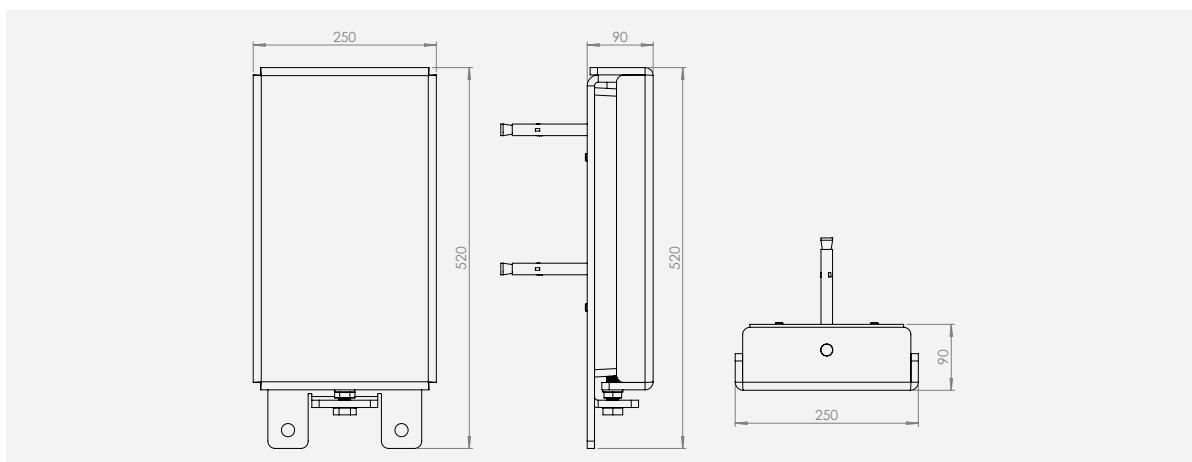

To enhance loading area safety and durability, it's recommended—in addition to proper loading dock maintenance—to use complementary products such as guide tubes, truck protection bump stops, and truck restraints.

These products address the need to **ensure safety** not only during the loading process but also to extend the **lifespan** of various loading vehicles and equipment: trucks, forklifts, pallet jacks, levelers, retractable shelters, and doors. These accessories **help reduce damage caused by time and repetitive wear** and tear.

Alapont Global's **reinforced steel bump stop** is constructed from 12mm steel sheet folded on all four sides, making it exceptionally **strong and durable**. It provides optimal performance and superior protection for your facilities and vehicles, even under the most demanding conditions over time.
