

Loading dock accessories

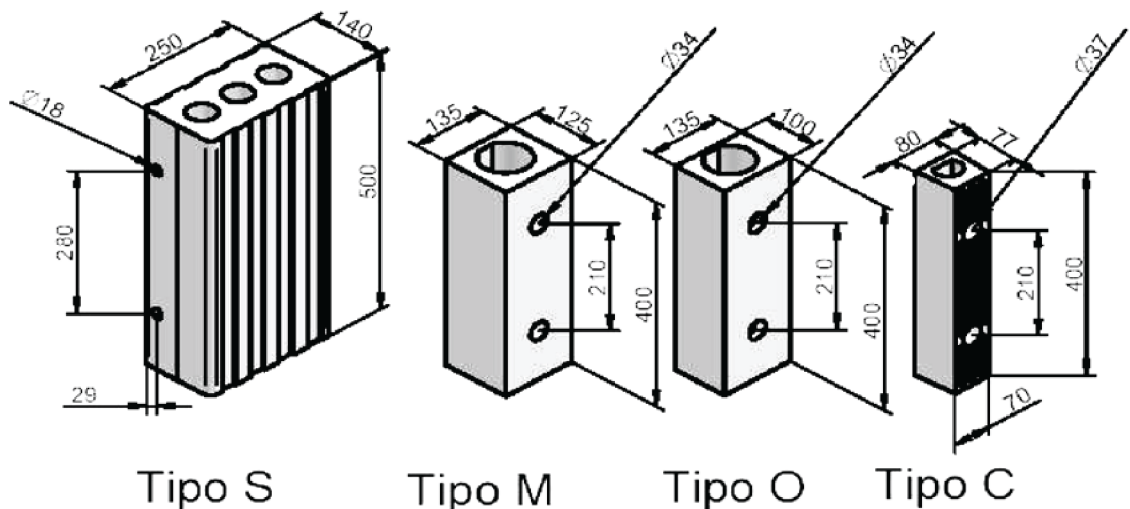

POLYURETHANE BUMPERS

Protection bumpers are essential for the durability of the loading area. They allow for the absorption of the frequent and repetitive impacts that occur at the dock during truck approach operations, protecting the facade as well as the rear of the vehicles.

High-resistance **polyurethane bumpers** stand out for their exceptional durability in adverse conditions, offering maximum resistance to friction, tearing, and cuts. Their impact cushioning capacity, rapid elastic recovery, and high load capacity make them the ideal choice for demanding industrial environments.

TECHNICAL SPECIFICATIONS

Dimensions: available in 4 models.

Longer lifespan than those made of rubber.

Lower maintenance and replacement costs.

Possibility of reversible use.

Greater protection and effectiveness.

Resistance to weathering, ozone, UV rays, greases, and oils.

Non-staining and do not leave marks.

Easily visible due to their bright yellow coloring.
