Accessories for loading docks

LAMINATED RUBBER BUMPERS

The laminated dock bumper is manufactured with a body of several sheets of rubber, aligned and pressed; and two black steel anchor elements.

This piece is used to be installed on loading and unloading docks to protect both them and the trailers or trucks from impacts that may occur when arriving at said dock.

- Due to the material with which they are made, they have protection against UV rays
- Resistant to humidity, oil, temperature variations and impacts due to their flexibility.
- Product manufactured under international quality standards, which makes it highly functional.

COMPONENTS

1. LAYERS OF PRESSED RUBBER

2. ANCHOR HOLES

The bumper has two holes in each steel anchor element for installation.
