Accessories for loading docks

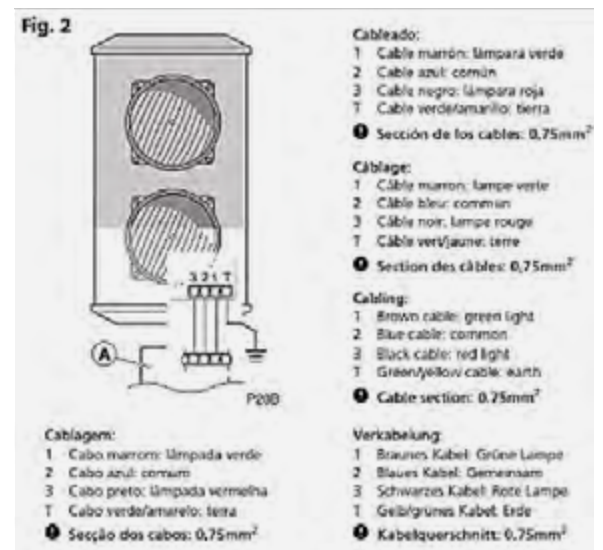

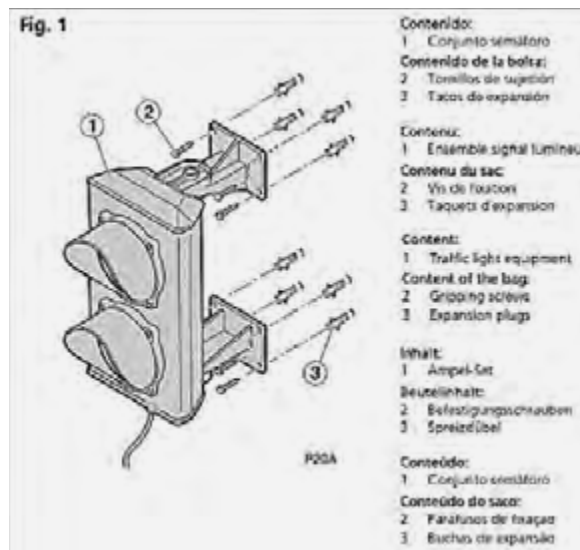

TRAFFIC LIGHT

Ideal for loading dock installations, this **traffic light** uses **green and red LEDs** to signal drivers whether they can maneuver during loading and unloading.

- LED technology reduces operating and maintenance costs.
- Card with two LED groups (red and green).
- Two mounts allow orientation within a 200° range, in 3° increments.
- Requires a control system to switch between red and green lights.

CHARACTERISTICS

TRAFFIC LIGHT CONTROL VIA PHOTOCELL

Alapont offers the option of integrating a photocell to control the traffic light. One application is to detect when a truck is about to hit the loading dock stops, automatically switching the light to red to signal the driver to stop. The photocell's placement depends on the types of trucks using that loading point.

This prevents trucks from impacting the stops forcefully.
