# STRUCTURE AND RAMP ASSEMBLY FOR AN ISOTHERMAL TUNNEL

Alapont Global's loading tables for isothermal tunnels provide a good solution when building design prevents the installation of interior ramps or a loading dock pit hasn't been planned.

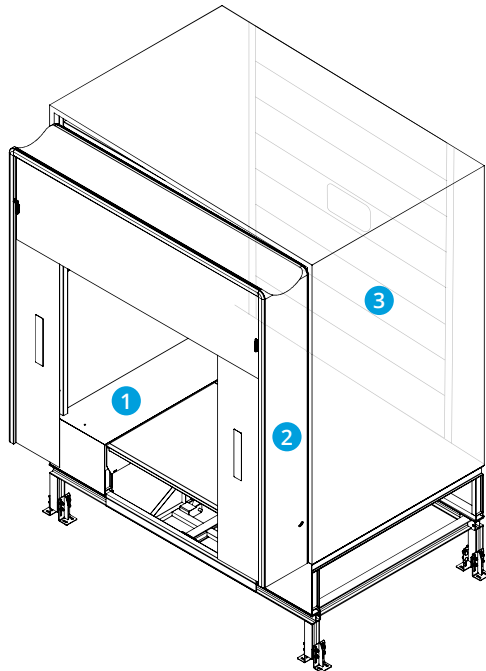

They are installed **in front of the warehouse**, allowing full use of the interior space.

They are **custom-made** to meet client needs. The loading dock ramp can be standard, telescopic, or vertical. Similarly, the shelter can be retractable or inflatable, depending on the required specifications.

This is an ideal solution for **expanding existing warehouses** or renovating them to add a new loading point **without modifying the interior**.

## COMPONENTS

1. METAL TABLE OR STRUCTURE WITH LOADING DOCK
2. LOADING OPENING WITH DOCK SHELTER
3. INDUSTRIAL SECTIONAL DOORS
