BOLLARDS AND BARRIERS

These bollards and barriers **protect** walls, doors, pillars, shelving, etc., from accidental **impacts**.

Various versions are available to suit different needs, with options for increased robustness.

Made from **polyethylene and polypropylene**, both **materials meet food-safe** standards.

- Effective protection.
- Easy installation.
- Maintenance-free.
- Easy replacement.
- Adjustable spacing.
- High visibility (due to color).
- Easy cleaning (smooth surface).

GROUND MOUNTING

Most bollards are anchored using 70x100 mm metal expansion anchors (requiring a Ø12 mm drill bit).

Chemical anchors are used when the ground offers poor grip.

The PLUS range uses a Ø50 mm hole for a tube and nut, secured with concrete or chemical anchors for strong rod attachment.
